ZWSOFT

特征VDATA框架与参数规则

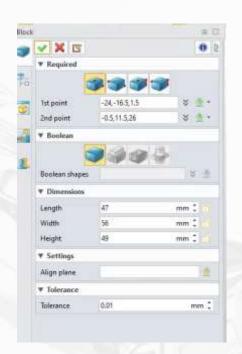

主讲人: 任赞佐

CONTENTS

什么是参数?

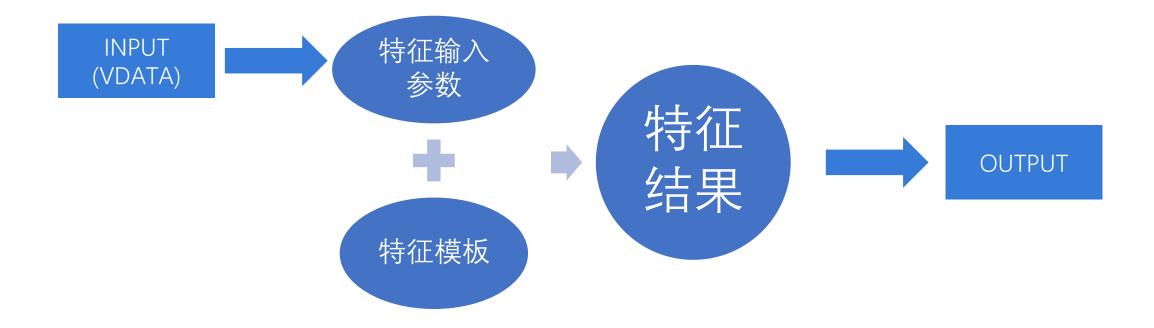

```
W show entry internation
 Entity information
 Data (1524)
  Template = PsAREon
  Version n 3000
 Input Backsip: No
 proc.jds:0
 inh_ide = -1
 Array: (1526)
 [1] 1st point = 1518
 [2] 2nd point + 1501
 [3] Length = 1502
 141 Width = 1501
 [5] Height = 1400
 [8] Block type + 1498
 [12] Height = 1495
 [14] Combine method = 1494
 [63] = 1493
 proc.idx:0
  infr_idx = 1524
```

```

```

参数就是特征VDATA

参数规则就是特征输入的设计、使用规范

- 1、关于特征参数如何编码,一些最基本的参数准则
- 2、特征的vdata如何设计,对于一些特别的需求如何能够在符合参数化的基础上设计
- 3、特征vdata如何使用,有哪些准则,在编码上有什么要注意的

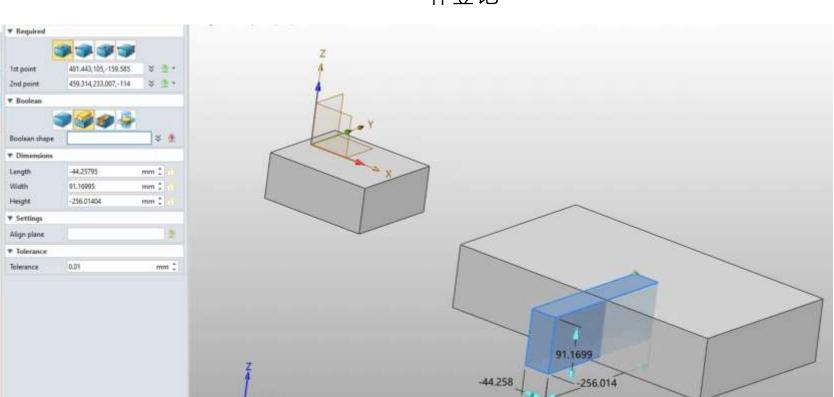

输入和特征使用应该——对应

1、用了不记

2、记了不用

特征应该保证内部的自洽性、一致性是一个独立自洽的单元

补登记

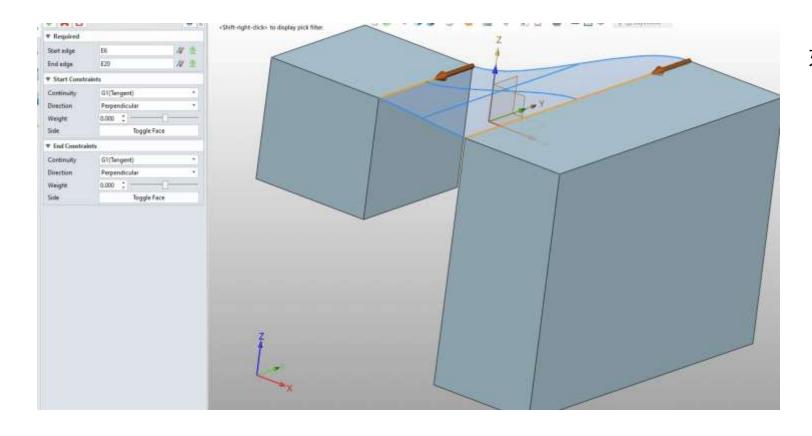

为什么需要补登记?

它对应的上面哪个原则?

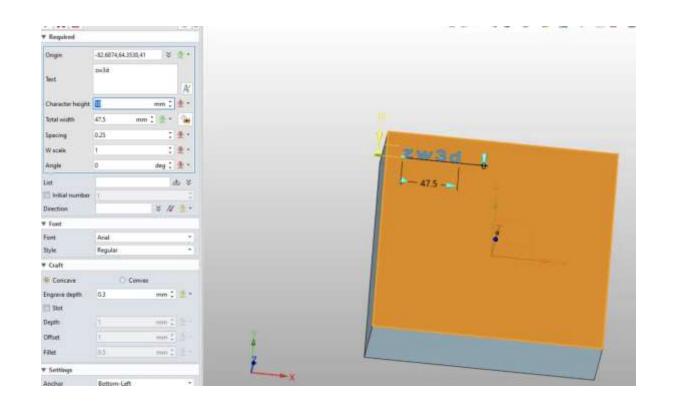

如何决定一个特征的输入?

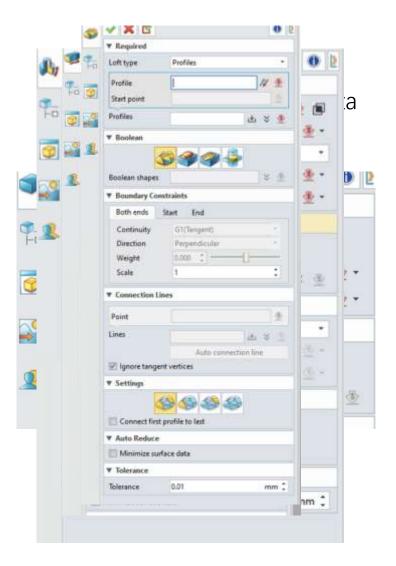

- 1、分析需求,实事求是
- 2、了解一些基本组件,复用基本组件
- 3、特殊需求通过模版实现

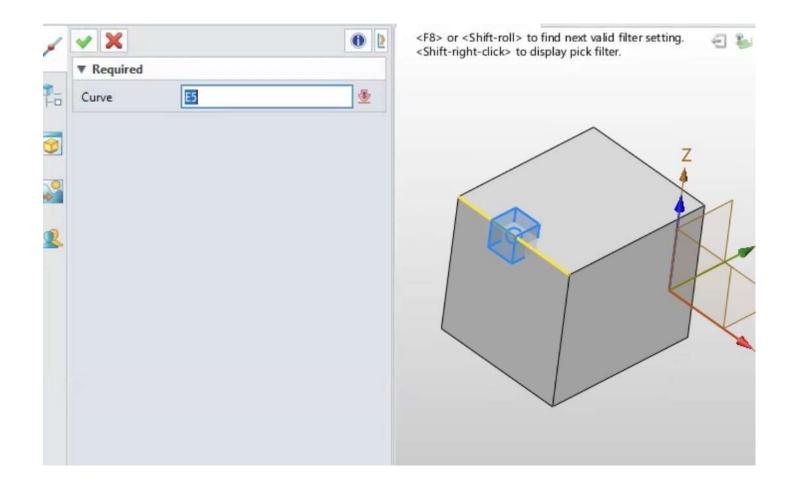

如何设计这个特征的vdata

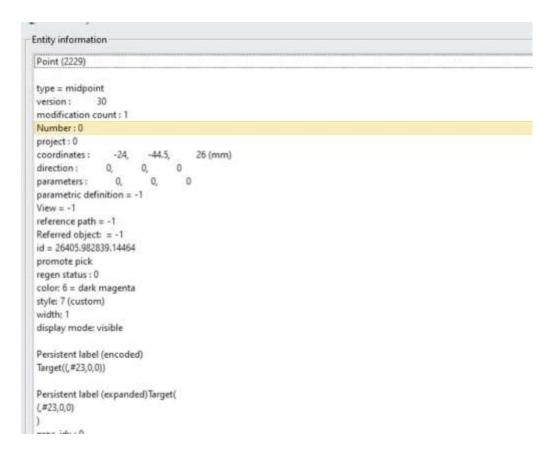

特殊的参数模版

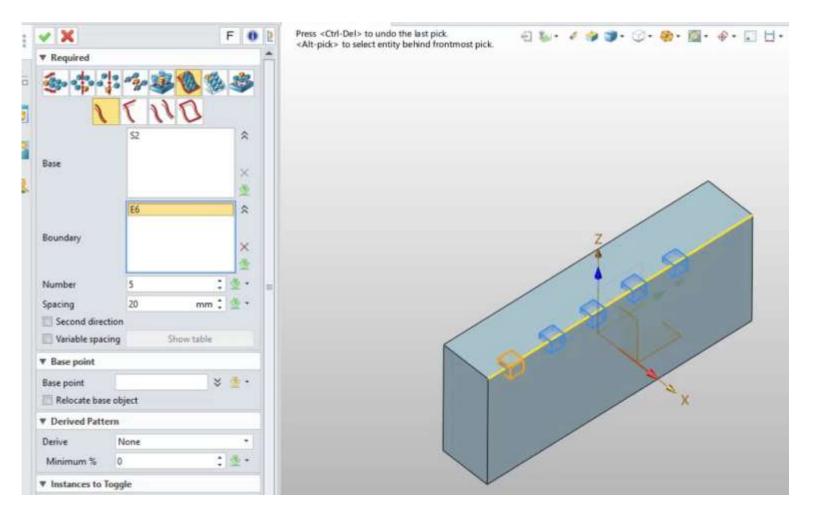

```
Entity information

Data (1799)
Template = CdPntBetween
Version = 3000
Input Backup: No
proc_idx : 0
inh_idx = -1

Array (1798)

[1] Points = 1802
[2] Percent = 1803
[4] = 1804

proc_idx : 0
inh_idx = 1799
```

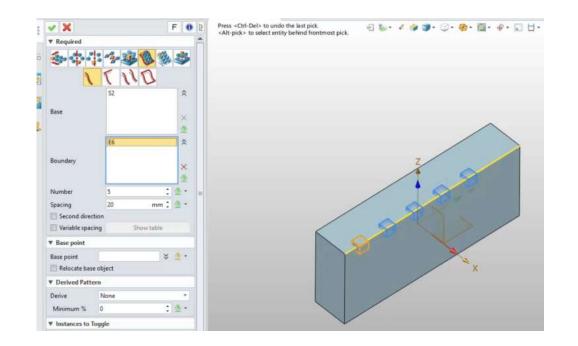

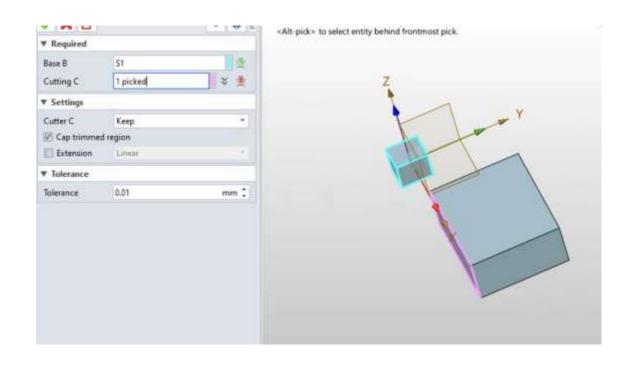

如何设计这个特征的vdata

输入边->特征建模(将拿到的边转换为curve)

参数模版输入为edge->输出curve 作为vdata->特征建模

有什么区别?

可以考虑新增加vdata类型 参考一个几何的情况不应该直接使用实体对象作为输入

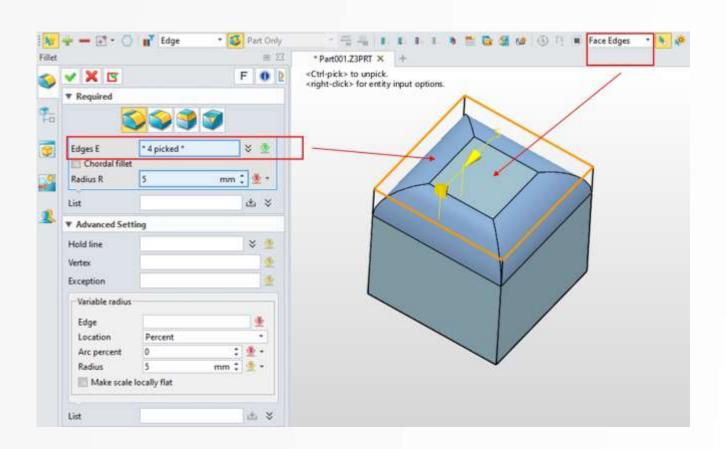

参数点参数值和特征一样具有vdata以及通过模版求解的结构有同样的要求 - 自洽、独立、正交

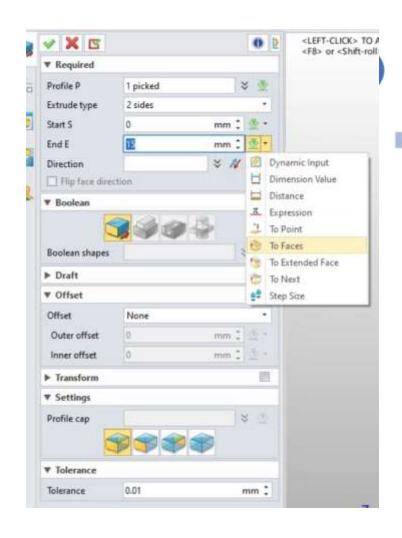

不同点: output不同

Q: 是否所有vdata都有求解的过程,实体对象的求解过程是什么?

延伸一下

参数的output种类

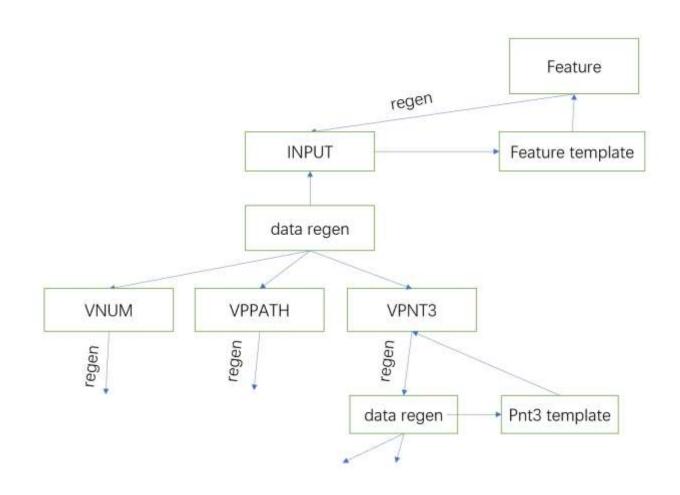

```
    † †:/zw3d_productional_architecture\cad\src\cmd\num\CdNumiPnt.cpp

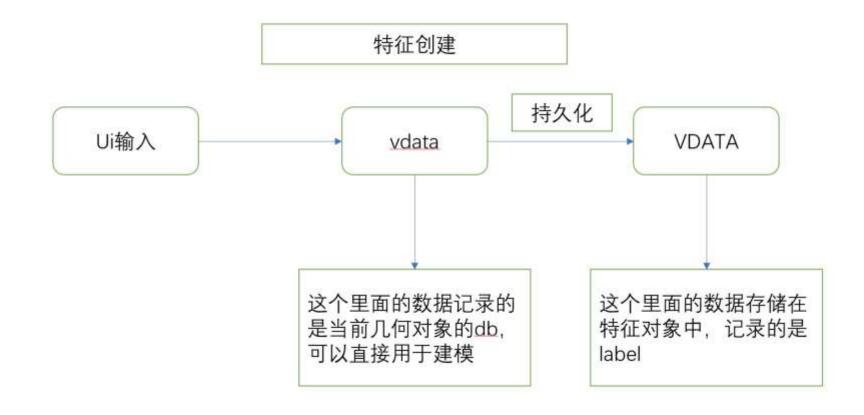

302
        int CdGetFaceset
393
394
        int-idx_in, --/*-I:-index-of-input-data-object-(class-VDATA)-*/
395
        int-*idx_out-/*-D:-Index-of-output-data-object-(class=VDATA)-*/
396
      E/10
397
398
        DESCRIPTION:
399
        Create:a:VNUM:object-in:the:PRJ_BIW:whose:value-is-zero,:with:the
        input-points (on-a-boundary-faces) object-attached-to-it.
498
401
        Output the index of the new VNUM object. The index will be piped
462
        to the active field of the active form.
483
464
        ---Field-i---Points-(on-Faces)-pick
485
406
        Return 1-if error, else-8.
407
488
400
        -- int iCnt -- 0;
       = --- if (VxInpCnt(idx in, -1, -&iCnt) - | | -iCnt --- 0)
410
411
412
         -----return-1;
413
        .....
414
       = --- if (VgFtrRegen > 0)
415
416
         1-1-5
417
         ....return-0;
        ....}
418
419
428
        --- VsObjHandle oh, toh;
421
         ---- C_AUTO_REVERT_BIN();
422
423
        --- CdD1spCommand();
424
425
        ----/*-get-a-copy of the point-pick-object-*/
476
       B ....
427
        ------OmInitOhByCurBin(&tob, --1);
        ....int idx_toh = toh.getIndex();
```

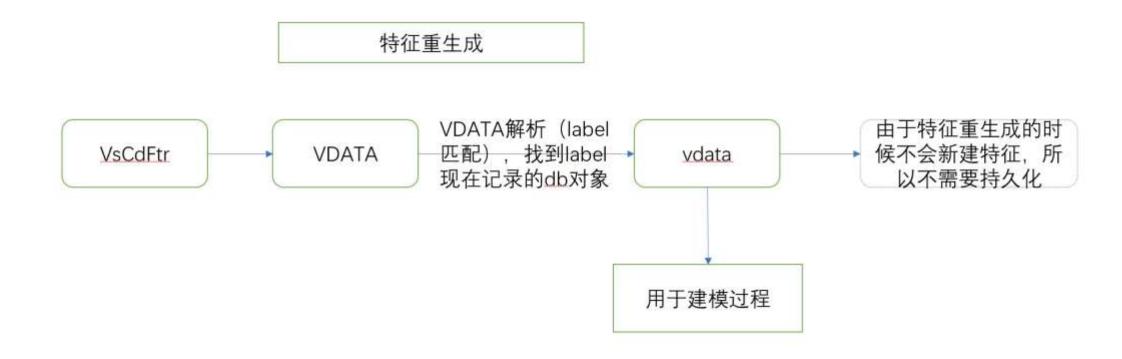

等合基本 应该有

- 1、ZW3D的模版功能强大,基本可以适配各种功能,不要为了做到各种 奇怪的功能加太多逻辑
- 2、鼓励大家使用自定义模版,当然是正确的使用,我们会整理出已有的模版,来达到复用的效果

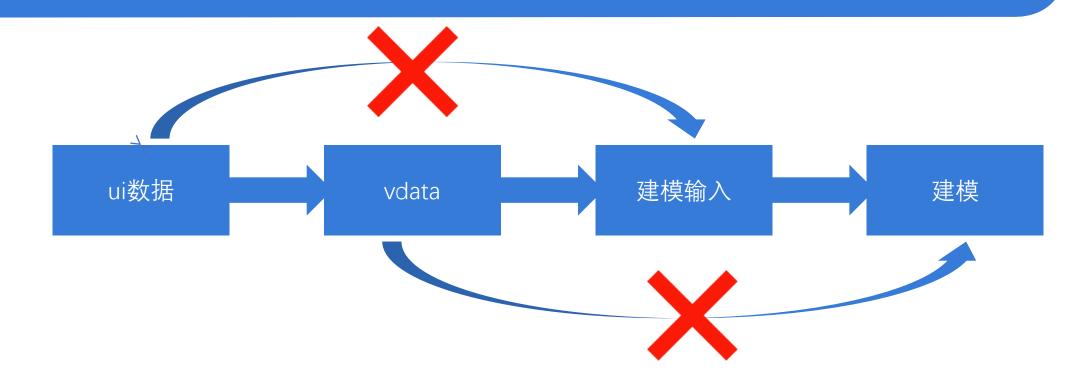

VDATA的使用规范

```
.../* Get the boolean state */
...if (VxInpInt(idx_in, 14, &iCombine))
...{
.....iCombine = VxSymCmdIntGet(VxDataName(idx_in), 14, V_FTR_MRGE);
....VxLogNum(idx_in, 14, V_NUM, iCombine);
....}
....VxSymCmdIntSet(VxDataName(idx_in), 14, iCombine);
```

获取类型	接口	备注
输入项	VxInpldx、VxInpList、VxInpItem	
Pick path	VxInpPathOnly、VxInpPathList	不修改src_bin
实体	VxInpOh、VxInpEnt、VxInpEntList、VxInpTtEnts、VxInpTtRef	会修改src_bin
数值	VxInpInt、VxInpNum、VxInpAng、VxInpDst VxInputInt、VxInputNum、VxInputDst、VxInputAng VxInputNewInt、VxInputNewNum、VxInputNewDst、VxInputNewAng	旧式 新式 新字段
点	VxInpPnt、VxInpPntList	
方向	VxInpDir、VxInpDirList、VxInpIdxDir、VxInpEntDir	
其他	VxInpPrfSingle、VxInpGen、VxInpClass、VxInpStr、VxInpBox、VxInpFtr
